

DataERP is a Polish professional solution for advanced production planning. The system gives you control and efficient management of the entire company. It integrates business and production processes as well as third-party applications.

The impressive system functionality supports manufacturers in effectively standardization production tasks, control and record real-world processes in your enterprise, and determine and reduce your operating costs. One coherent database, easy set-up, and in-depth analysis of inventory, orders, offers, planning, and production reports speeds up and increases the accuracy of management decisions.

IMPLEMENTATION OF MODERN PRODUCTION PLANNING

The system is a professional tool that can be used to schedule production orders. It allows you to estimate the necessary lead time in the production cycle, as well as group orders according to certain criteria.

It's the powerful tool to time recording on your production orders and the activeness of individual workers.

Using the software, the company will be able to make better use of the potential of employees, machines, materials, maintain expected stock levels and achieve lower energy consumption of raw materials and time.

dataERP FOR SECTORS

Data ERP as a flexible software that fits to the needs of small, medium and large enterprises, serving industries such as metal, automotive, furniture, rubber and plastics, and more.
